

Why Believe in Helioseismology?

Tying Up the Loose Ends

Tim Larson

tplarson@sun.stanford.edu

thesis discussion

Introduction

- What is Global Helioseismology?
 - Equations
 - History
- Motivation
 - Discrepancies
 - Improvements

Data

- Mount Wilson Observatory (MWO)
- Michelson Doppler Imager (MDI)
- Global Oscillation Network Group (GONG)
- Helioseismic and Magnetic Imager (HMI)
- Others

Processing Pipeline

- Filtergrams to Observables
- Spherical Harmonic Decomposition
 - Leakage
- Detrending and Gapfilling
- Fitting Mode Parameters
- Inversion

Observations

- Solar Cycle Variations
- Differential Rotation and Torsional Oscillation
- Meridional Flows
- Supergranulation

MERIDIONAL FLOW COMPONENTS

S_1^0

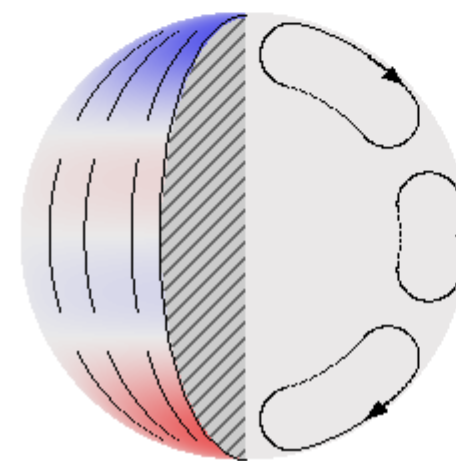

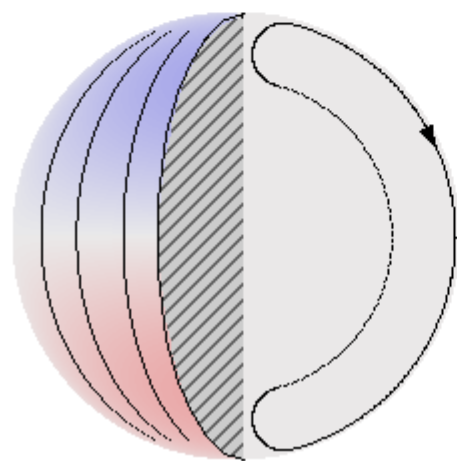

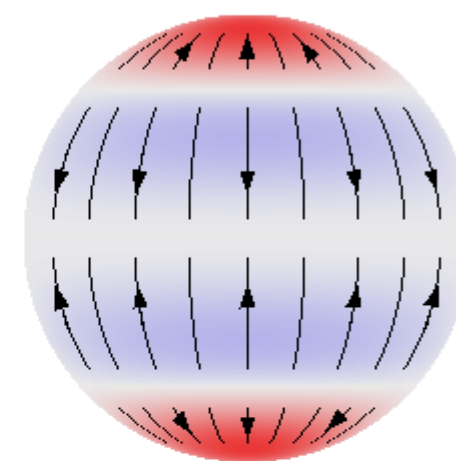

S_2^0

S_3^0

S_4^0

Convection Pattern 1996 May 24

Variations

- Corrections in Remapping
- Timeseries Processing
- Fitting Methods
 - Different Line Profiles
- Leakage Matrices

Comparisons

- Between Datasets
- Between Fitting Methods
- Simulations

New Ideas

- Simultaneous Fitting of Multiple Observables
- Fitting for the Leakage Matrix
- Information from Other Mode Parameters
- Using Magnetic Field Data

Discussion

- What Have We Learned?
- Future Work
